Design Basis and Boundary Note

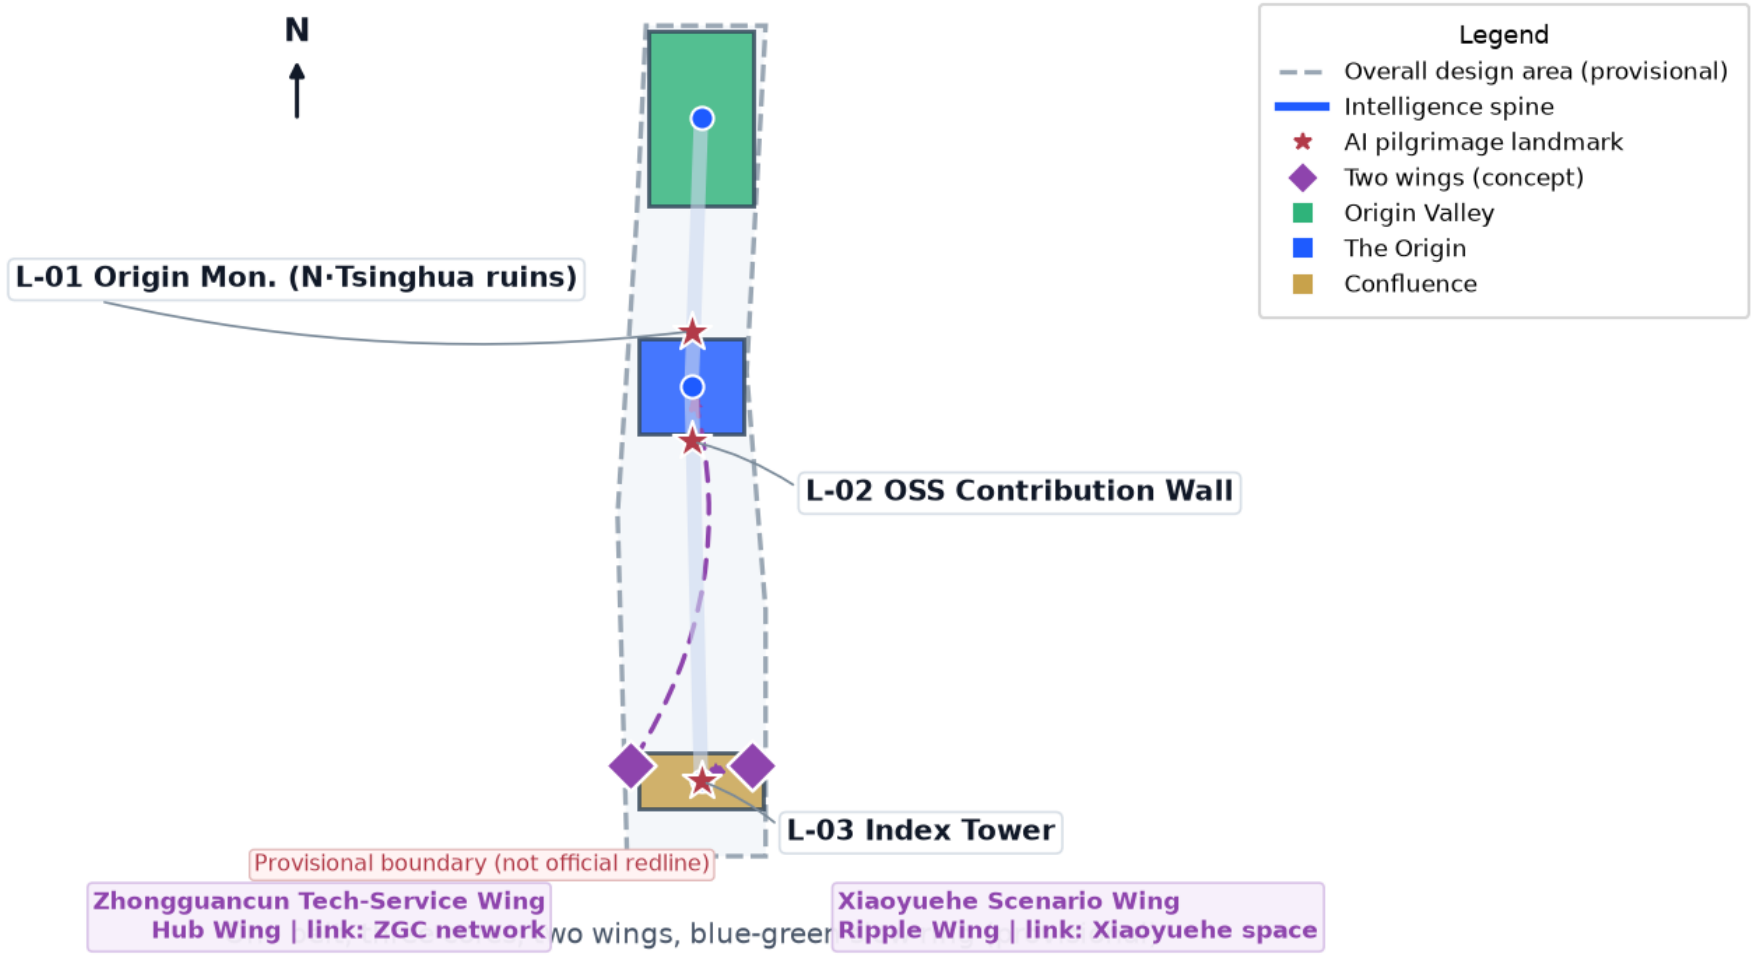

This proposal is based on the Haidian pre-qualification announcement and the provisional boundary provided in brief/site-package/. All spatial recommendations are conceptual and for further professional study; they do not constitute official approval or government implementation commitments.

Three-Level Scope Framework

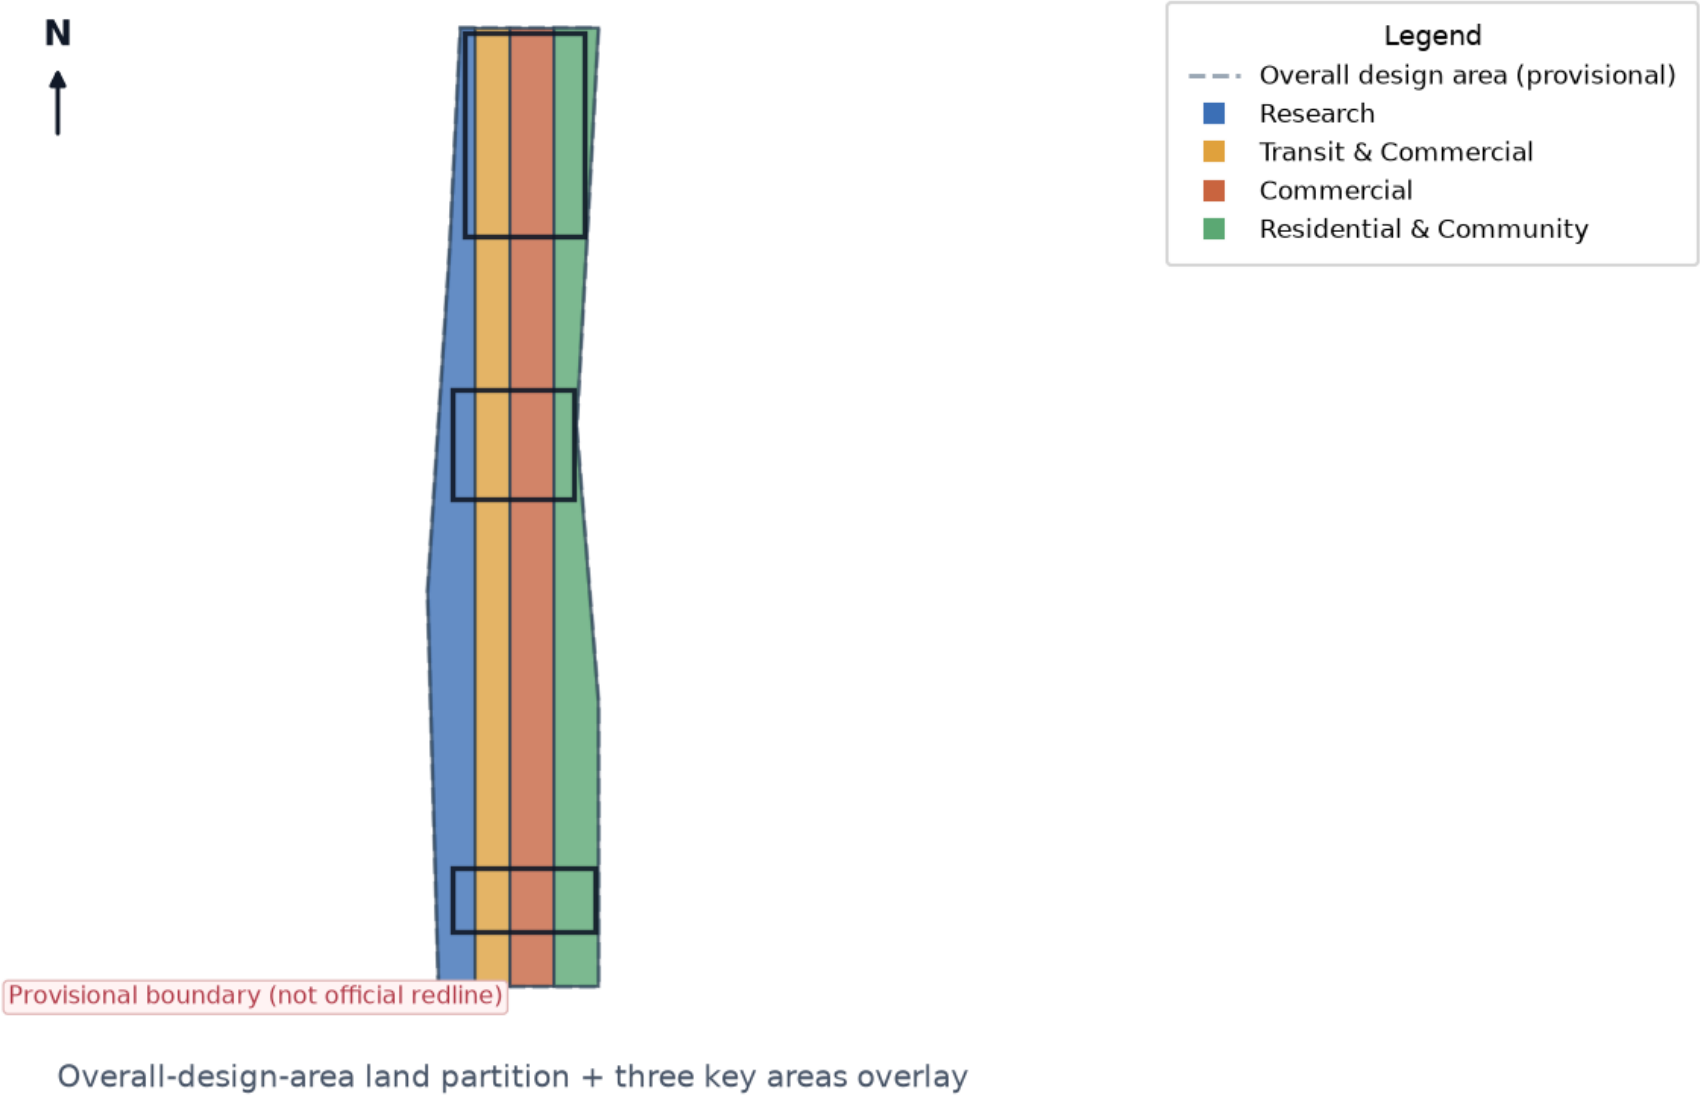

Coordinated research area 43.6 km²; overall design area 11.41 km²; three key areas 368.4 ha.

Master Concept: Jing-Zhang Civic Intelligence Corridor

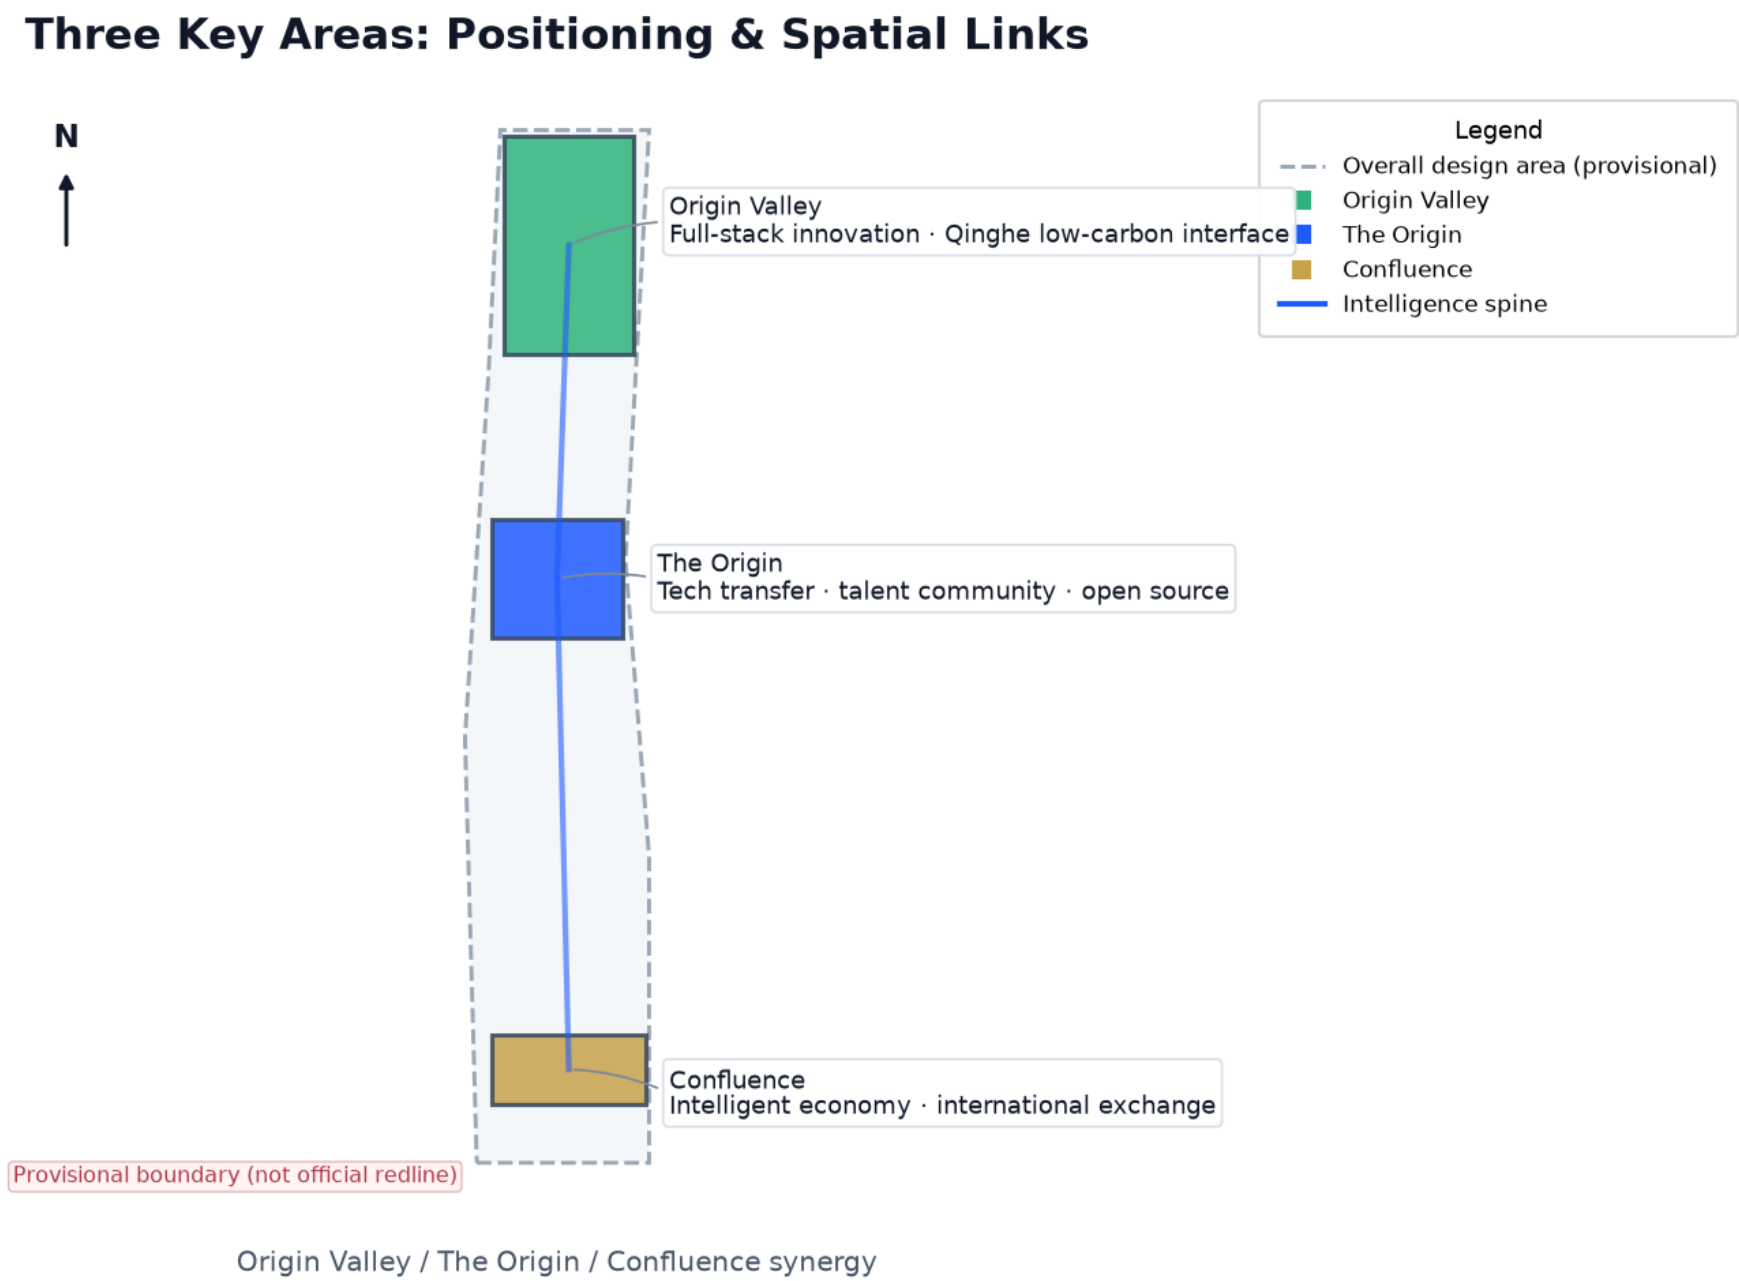

Master Concept: Jing-Zhang Civic Intelligence Corridor

Land-Use Structure & Three-Level Scope

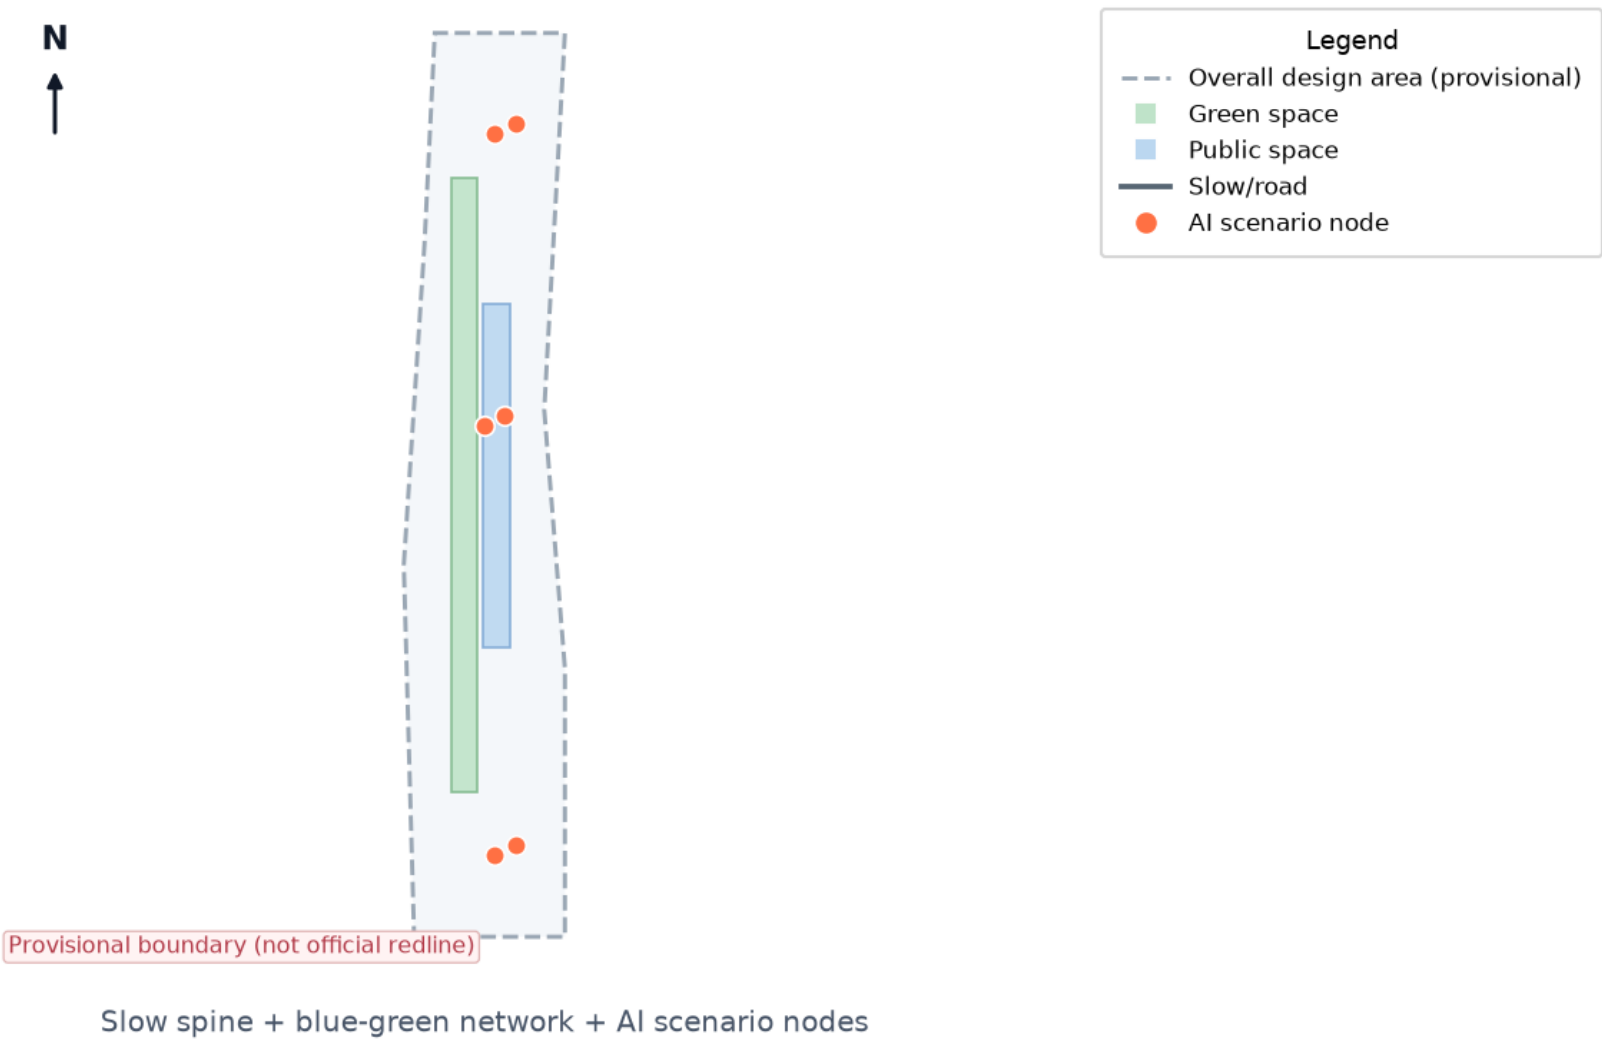

Three Key Areas: Positioning & Spatial Links

Slow-Mobility & Blue-Green Public-Space System

Slow-Mobility & Blue-Green Public-Space System

Core Metric Recomputation & Evidence

Core Metric Recomputation & Evidence Chain

Recomputed from submitted geometry in EPSG:4548 (provisional model)

Evidence chain:

site_boundary.geojson → metrics.json (EPSG:4548) → visual/index.html (data-value)
green_space.geojson + public_space.geojson → green_ratio / public_space_ratio
compliance_matrix.json + design_depth_matrix.json → professional evidence
Provisional boundary: model values, recompute after official polygons.

Provisional boundary (not official redline)

Three Key Areas

Zhongzhiyuan AI Innovation Acceleration Area: a garden-style independent-innovation quarter.

Beijing AI Origin Community: a university-adjacent transformation quarter linking academic research and open source.

Dazhongsi AI Industry Cluster: an urban smart-economy quarter focusing on leading enterprises and AI-native business.

AI Scenarios and Operations

Ten AI scenario cards, with Urban Agent Sandbox, Walkability Gap Diagnosis and Open-Source Release Hall as test/validation scenarios.

Metrics, Recalculation and Compliance

site_area_sqm = 11412825.386 m² (recomputed in EPSG:4548); green_ratio = 12.3%; public_space_ratio = 7.3%.
compliance_matrix.json covers announcement sections 1.3–1.5 and agent.1–agent.6.

Copyright and Compliance

All figures are derived from submitted GeoJSON and metrics; provisional boundary is for intake/discussion only and will be recomputed after official polygons are released.
